Building services

Our communication and security solutions for hospitals, clinics and health centres:

- Lift emergency call according to EN 81
- Disinfectant-resistant and operating theatre call stations
- Intercom stations for clean room environments
- Counter intercom systems
- Doctor and ward intercom systems
- Intercom systems with control functions for entrances/exits, access routes, gates, barriers, etc.
- Door communication and access control for sensitive security areas
- Integration of nurse call systems and building technology systems
- Info terminals, vandal-proof and weatherproof
- Emergency alarms and evacuation
- Gate and control center communication
- Public address and alarm announcements
- Integration of radio systems
- Car park communication
- Interlock communication and control
- Flexible call forwarding
- Video integration

Gehrke
more than voice

Crystal clear and fast communication with NeuroKom® IP.

NeuroKom® IP systems mean direct communication that can save lives and increase efficiency. Across departments, buildings and locations. The quick and organised exchange of important information enables optimal problem solving, coordination and process optimisation through free two-way communication – whether at the barrier in the car park, at the gate, in the lift, in the wards or in operating theatres, in administration or security areas or as alarm announcements.

Serverless NeuroKom® systems

- Independent, intelligent, SIP-compatible call stations
- Open duplex communication
- Excellent voice quality
- Compatibility with existing solutions
- Easy installation, configuration and maintenance by in-house or external personnel

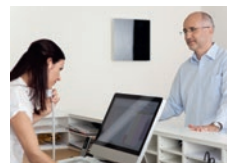

We are there where you need us. Reliable and safe.

Car parks, access roads, doors, gates or locks require direct communication to ensure smooth operations, and not just in the event of an emergency or malfunction. Good speech intelligibility and control functions are the be-all and end-all. Suitable NeuroKom® IP intercom stations provide information, assistance and coordination at the touch of a button.

The **reception desk** is the switching and control centre for all the hospital's technical facilities. The main task is to communicate and react appropriately in every situation. The modular control centre system offers communication with control functions, e.g. for entrances/exits, access routes, barriers, radio conferences, PA announcements, alarm and fault management for all systems, including building management systems.

possible in the simplest way.

Permanent verbal contact with patients offers everyone in the **functional and treatment rooms** safety and the good feeling of being properly informed at all times. Specific intercom stations make this possible in a very simple and reliable way.

In the **operating theatre**, fast and precise communication is of central importance for teamwork and the coordination of procedures. Gehrke intercoms with surfaces resistant to cleaning agents and disinfectants for aseptic environments and operating theatres guarantee clear, hands-free communication.

Some results need to be commented on quickly. **Laboratories and diagnostic areas** can immediately exchange information with their colleagues using voice transmission via NeuroKom® IP.

More time for patients on the **wards** is possible through improved and shortened organisation and coordination time. The fastest way of communication is still speech. And the nursing team can do this even over distances with NeuroKom® IP intercoms.

Neural **lift emergency call systems** in accordance with EN 81 enable reliable communication and problem solving in critical situations for those seeking help. The same applies to maintenance personnel during service journeys.

In the event of a fire or other hazard, the alarm must be raised in good time to ensure a safe exit from the building. Gehrke systems provide support for **alerting and evacuation**, of course in accordance with EN 54-16.

Arrange a non-binding consultation appointment now on **+49(0)211 545701-00**.
