

Components modular · neural · simple

Car parks, entrances, gates,
doors & outdoor areas

Cells & cell corridors
according to police guidelines

Counter intercom

Guard, gate & reception

Administration, office &
corridors

Elevator emergency call

Radio workstations
& radio switching

Video surveillance

Our communication and security solutions – for all cases.

- Radio conference stations with radio switching of analogue and digital radio (TETRA etc.)
- Dynamic radio conferences as a redundant conversation level
- Control station intercoms and control centre communication
- Official alarm e.g. in interrogation rooms and cell vestibules
- Alarm announcements, house alarm and evacuation
- Alarming in the operations centre
- Lift emergency call system in accordance with EN 81
- Public address
- Office communication with radio monitoring and meeting equipment
- Intercom systems for direct communication to all work areas
- Communication and control of doors, gates, security locks, access roads
- Flexible call forwarding
- Visualised workstations
- Emergency call stations, also in accordance with VDE 0834
- Counter intercom systems
- Control of building services, also in the event of an alarm
- Access control
- Video surveillance and video integration
- Cell intercoms in accordance with VDE 0834

Gehrke
more than voice

Perfect information and communication with NeuroKom® IP.

With **NeuroKom® IP**, Gehrke offers one of the most modern communication systems, which was developed with the experience of over 30 years of using intercom technology in the police force.

Absolute reliability is paramount in police work. And so the centralless NeuroKom® IP system, without the so-called "single point of failure", is optimally equipped for police organisations of all sizes.

All organisational media relevant to the police are supported and managed by NeuroKom® IP. This includes the integration of cell communication for calming and detention cells as well as the integration of police radio communication. No matter whether analogue, digital or even a combination of both radio technologies, NeuroKom® IP provides the perfect radio intercom facility. Building services and security systems are combined and managed by NeuroKom® IP.

Reliable and safe wherever you need us.

Uncontrolled access is prevented at **entrances, doors, gates, counter or security locks**. Communication here takes place via bidirectional intercom systems that work "stand alone" or can be easily integrated into an entire NeuroKom® IP system.

In administrative environments of **administration, offices** and in the **corridors**, intercom stations become communication integrators for conversations and monitoring of interrogation or custody rooms. IP loudspeakers provide information in everyday life and in crisis situations.

Neural **lift emergency call systems**, EN 81-compliant, offer passengers reliable and competent assistance at short notice.

The police's most important communication facility is radio. Special **radio workstations** enable the simultaneous processing and parallel monitoring of several radio devices. All NeuroKom® IP devices in the administration can function as radio monitoring and meeting devices.

In the **cell and custody area**, neural intercom stations ensure secure and rapid communication between guards and inmates in order to avoid possible incidents.

The **armory and evidence rooms** are specially secured rooms in which Gehrke implements the corresponding monitoring function.

In areas such as **company car parks, workshops, service and logistics facilities, public address and intercom systems** support processes. Unauthorised persons can be contacted immediately.

Video surveillance technology as a second security level is the ideal complement to the NeuroKom® IP intercom system. Event or surveillance cameras are integrated into the processes.

Voice, video, radio and building technology come together at the **guard station, gate or reception**. When there is a high volume of work, the required capacities are made available via automatic forwarding and redirection via the network infrastructure.

Serverless NeuroKom® systems

- Independent, intelligent, SIP-compatible call stations
- Open duplex conversations
- Excellent voice quality and intelligibility
- Integration of existing solutions
- Easy installation, configuration and maintenance by in-house or supporting staff
